DURHAM, NH – New Hampshire's U.S. Senators continue to be popular among Granite Staters, but First Congressional District residents are split on their opinions of Rep. Frank Guinta, and Rep. Charlie Bass is now seen unfavorably by residents of the Second Congressional District.

These findings are based on the latest **WMUR Granite State Poll**,* conducted by the University of New Hampshire Survey Center. Five hundred four (504) randomly selected New Hampshire adults were interviewed by telephone between April 15 and April 26, 2011. The margin of sampling error for the survey is +/- 4.4 percent. Included was a subsample of 243 adults in the NH First Congressional District (margin of sampling error +/-6.2%), and a subsample of 257 Second Congressional District adults (margin of sampling error +/-6.1%).

Despite maintaining a low profile in recent months, Democratic Senator Jeanne Shaheen's popularity has remained remarkably stable since she was elected. In the most recent Granite State Poll, 48% of New Hampshire adults view her favorably, 36% have an unfavorable opinion of her, and 16% are neutral or don't know enough about her to say. Shaheen's net favorability rating, the percentage that have a favorable opinion of her minus those that have an unfavorable opinion, is a modest +12%. Shaheen is viewed very favorably by Democrats (net +74%), but is viewed unfavorably by Independents (net -3%), and very unfavorably by Republicans (net -48%).

Granite State Poll Methodology

These findings are based on the latest WMUR Granite State Poll, conducted by the University of New Hampshire Survey Center. Five hundred four (504) randomly selected New Hampshire adults were interviewed by telephone between April 15 and April 26, 2011. The margin of sampling error for the survey is +/- 4.4 percent. Included was a subsample of 243 adults in the NH First Congressional District (margin of sampling error +/-6.2%), and a subsample of 257 Second Congressional District adults (margin of sampling error +/-6.1%).

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response.
